Marantec trouble codes

Top positive reviewAll positive reviews> Jas and Joce5.0 out of 5 starsNot the root cause of my issue, but if you need this sensor, it works just fine.Reviewed in the United States on July 29, 2018Randomly my Marantec 4500 garage door opener light started blinking right as the door was almost completely open. It seemed like it was struggling at that last part then stopping and blinking the light. At first I figured maybe the heat of the Texas summer caused an issue so I re-adjusted everything and there was no issue with the opener getting the door all the way to the top when adjusting, it only had an issue when running it. I could help the door along, pushing it at that last part when opening and it'd be totally fine. I even increased the up force to the max and it still struggled at that last part. I read the manual and it said the code meant this part was the issue, so I ordered it. After replacing this sensor, it was still doing the exact same thing.I don't want to rate this product low because it was exactly as described, came quickly, and functioned perfectly. It just wasn't the root cause.For anyone else having this same issue where their Marantec 4500 has trouble at the very end of either closing or opening, check the large capacitor on the circuit board to see if the end of it isn't perfectly flat or is slightly bulging. I was able to grab a 10-pack of 2200uF 35v capacitors here on Amazon for about $8 and replaced the large capacitor on the circuit board. After doing so, it was working perfectly. And now I've got some on hand in case this happens to the other opener. ☺ Remove any restrictions. A properly balanced door will hold itself halfway open while being supported entirely by its springs. If not, check fuse box or circuit breaker (some outlets are controlled by wall switch). The door should then start to move. Follow this link if you need more information on Marantec garage door openers. Point with remote control to the door.
